Our taxpayers dollars goes to fund those folks who work with the milk industry going after farmers raising cows in pastures, tending to the environment and serving the local community.

Pasteurized

~~Raw~~ Milk ~~May~~ Pose Health Risk

Pasteurized & Homogenized Milk

From cows raised in factory stalls with

Growth hormone
Antibiotics
Grain and corn

What's a building block in the food pyramid that's important for building and maintaining bone mass? It's milk.

Whether it's from cows, goats, sheep, or another mammal, milk and milk products are an important source of calcium throughout a person's life.

Disease Control and Prevention (CDC) recommend pasteurization for all milk consumed by people in the United States.

Pasteurization Reduces Illness

Pasteurization of milk is an effective means of preventing outbreaks of foodborne illness, including tuberculosis, brucellosis, salmonellosis, scarlet fever, and listeriosis. It was first used in the United States more than 100 years ago and has been widely used for more than a half-century, says John Sheehan, an FDA expert on the safety of dairy products.

State-by-State* Review of Raw Milk Laws

May 17, 2010

* Other forms of raw milk distribution may also be allowed in any particular state.

** There is no law either legalizing or prohibiting herd shares. State is aware herd share programs currently exist and has taken no action to try to stop them.
